PORTFOLIO

sajjad-hossain0.netlify.app

TECHNICAL SKILLS

- Embedded C and Python
- Arduino and ESP32
- Sensor interfacing
- Circuit integration
- PCB design and printing
- Micro-soldering
- Ground-control UI
- Responsive web development
- Data analysis and reporting
- Project coordination

EDUCATION

B.Sc. in Avionics Engineering
2023 - Present

Higher Secondary Certificate
2022 - GPA 5.00

Secondary School Certificate
2020 - GPA 5.00

LANGUAGES

Bengali: Native
English: Fluent in reading, writing and speaking

PROFILE

Motivated avionics engineering student focused on electronics, programming, circuit design and embedded systems. I build across the complete signal path - from sensor interfacing and controller integration to dependable operator interfaces.

Hands-on university projects, research and software work have strengthened my problem-solving, teamwork and technical delivery. I am eager to keep learning and contribute to real aerospace and engineering systems.

CORE FOCUS

01

Embedded systems

Controllers, sensing, calibration and firmware.

02

Flight interfaces

GCS concepts, telemetry and operator interaction.

03

Circuits and PCB

Integration, fabrication, soldering and testing.

04

Software systems

Web applications, UI design and data reporting.

FEATURED ENGINEERING WORK

M-01

Avionics Systems Project

Navigation, controller integration, GCS interface and recovery deployment testing.

MCU / NAVIGATION / RECOVERY

M-02

Engine Health Monitoring

ESP32 and Hall-effect sensing for a 20cc light-aircraft engine monitoring system.

ESP32 / SENSORS / CALIBRATION

M-03

Frequency-Hopping Radar Research

Simulation and system design focused on resilient radar operation.

RADAR / RF / SIMULATION

EXPERIENCE AND PROJECT LOG

MD. SAJJAD HOSSAIN / AVIONICS - EMBEDDED - SOFTWARE

AVIONICS AND EMBEDDED SYSTEMS

TEAM SHUNNO

Avionics Systems Team Member

Controller integration, navigation development, GCS UI and parachute deployment testing.

AAUB DRONE CLUB

Executive Member - Software

Control-interface and UI/UX concepts for an aerial-surveillance drone and its ground-control software.

DESIGN-BUILD-FLY TEAM

Avionics and Propulsion Team Member

Design, integration and testing support for avionics and propulsion systems on a student aircraft.

AIRCRAFT SYSTEMS PROJECT

Arduino-Based RC Plane Project

Designed, programmed and integrated an Arduino-based remote-controlled aircraft.

EMBEDDED MONITORING PROJECT

20cc Engine Predictive Maintenance

ESP32 and Hall-effect sensing, circuit integration, calibration, firmware and monitoring UI.

RESEARCH AND COMPETITION

UNDERGRADUATE RESEARCH

Radar System and Frequency Hopping

Radar-system simulation focused on frequency-hopping techniques, resilient operation and implementation.

LEADERSHIP, COMMUNITY AND DISCIPLINE

Volunteer and Organizer
Red Crescent Youth, Volunteer for Bangladesh and
Badhon Blood Donation Camp - humanitarian work,
coordination, fundraising and event operations.

Community Leadership
Coordinator at Sopnoshiri and Shekor social
organizations; former president of Phulbary Science
Club.

Shito-ryu Karate - Brown Belt
Training at Freedom Martial Art Academy, developing
discipline, physical conditioning and perseverance.

Software Service Work
Part of a small technology team designing and
maintaining websites, web applications and user
interfaces.
